25X1A

SUBJECT: OPD 045-65, Equipment for Project [REDACTED]

25X1A I think our normal procedure here should be to determine whether or not the equipment selected is appropriate to the task. This will require as in the case of [REDACTED] an understanding of the collection particulars. For example, the nature of the signal, range, etc., which may be encountered. Following that it would be appropriate for a GSD engineer to determine what the technical requirements of the equipment will be so that [REDACTED] can then test to the appropriate levels and provide for you the assurance which you request.
